

## Product Datasheet

### HSP70/HSC70 - Heat shock protein 70/Heat shock cognate protein 70, Affinity purified GRP12200

<b>Species/Host</b>	Rabbit
<b>Reactivity</b>	Fungi, Fish, Mammal
<b>Predicted Reactivity</b>	Bovine, Danio rerio (Zebrafish), Drosophila melanogaster, Hen, Mouse, Rat
<b>Tested Applications</b>	IP, WB
<b>Immunogen</b>	KLH-conjugated synthetic peptide conserved across all known sequences of HSP70 P08107 and HSC70 proteins P11142
<b>Form/Appearance</b>	Lyophilized in PBS pH 7.4
<b>Storage</b>	Store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please, remember to spin tubes briefly prior to opening them to avoid any losses that might occur from lyophilized material adhering to the cap or sides of the tubes.
<b>Note</b>	For research use only.
<b>Clonality</b>	Polyclonal
<b>Purity</b>	Affinity purified serum
<b>MW</b>	70 kDa
<b>Uniprot ID</b>	P08107 , P11142
<b>Dilution Range</b>	1 : 1000 (IP), 1 : 1000-1: 5000 (WB)
<b>Application Notes</b>	<p>Additional Information: This antibody is not suitable for work with samples from higher plants For detection of plant and algal cytoplasmic hsp70 we recommend following product: AS08 371 Background: Heat shock protein 70 (Hsp70) is the major stress-inducible protein in vertebrates and is highly conserved throughout evolution. It plays a role as a molecular chaperone and is important for allowing cells to cope with acute stress or insult, especially those affecting the protein machinery. Heat shock cognate protein 70 (HSC70) is a highly conserved protein and a member of the family of molecular chaperones. Alternative names: HSP70.1, HSP70-1/HSP70-2, Heat shock 70 kDa protein 8 Reconstitution: For reconstitution add 50 µl of sterile water</p>
