Mre11 antibody [12D7] GRP88

Description	Mre11 is an 80 kDa protein that acts as a Mn+2 dependent double stranded DNA 3' to 5' exonuclease and a single stranded DNA endonuclease. It is part of a larger complex with Rad50, p95 (Nibrin) and possibly other associated proteins involved in the nucleolytic end-processing of double strand breaks and telomere maintenance.

Whole cell extract (30 µg) was separated by 7.5% SDS-PAGE, and the membrane was blotted with Mre11 antibody [12D7] (GRP540) diluted at 1:500. The HRP-conjugated anti-mouse IgG antibody was used to detect the primary antibody, and the signal was developed.
